X

## Journey to Cloud: Envisioning Your Solution

This credential earner demonstrates knowledge and understanding of the digital transformation drivers made possible by cloud technologies and services. This includes: how cloud works, its capabilities, types, and delivery models (IaaS, SaaS, and PaaS); digital transformation strategies such as Agile practices, the IBM Garage Method, and Enterprise Design Thinking to help organizations get started on their transformation journey; & deploying a test pilot cloud application using IBM Code Engine.

For Data science go through above and scrawl

## IMPACT.

Answers to the most important questions facing a business often lie within its own data. Data science enables businesses to mine that data for drivers of past and future performance, opportunities for new revenue, methods to increase efficiency, ways to improve customer experience and a host of other critical business insights. In short, data science provides an unbiased examination of the past while pointing the way to the future.

```

From above slide You can see in detail and connect your application to data

base by giving you database name, hostname, userid, password import ibm\_db

```
conn=ibm_db.connect("DATABASE=database;HOSTNAME=hostna
```

```
me;PORT=port;PROTOCOL=TCPIP;UID=username;PWD=password",  
",")
```

```
connState = ibm_db.active(conn) print(connState)
```

Import above code in your application.

Learn containers, Kubernetes, and OpenShift in your browser

# Start exploring in the Developer Sandbox for free

Try Red Hat's products and technologies without setup or configuration.

[Start your sandbox for free](#)

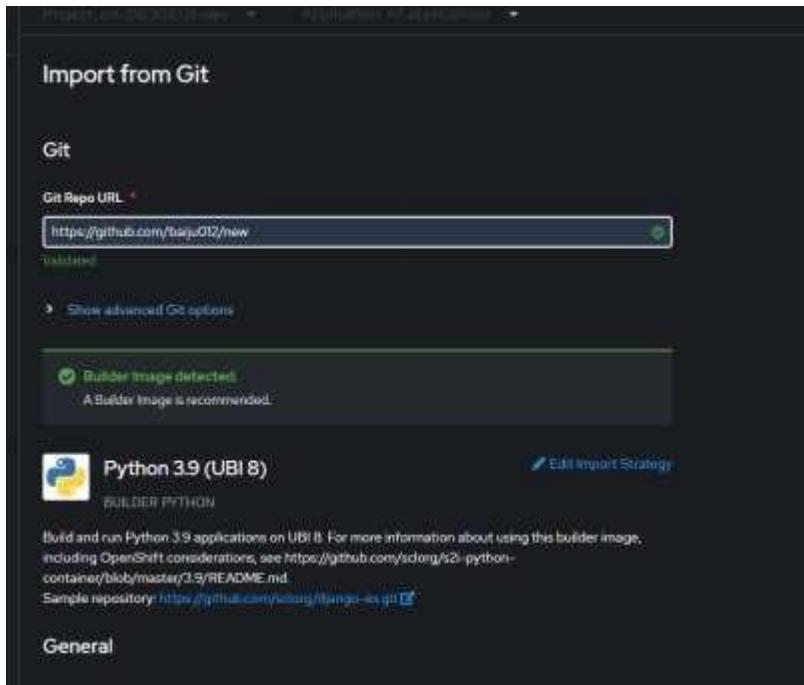

The screenshot shows the Red Hat Developer website's "Developer Sandbox" section. At the top, there is a navigation bar with links for Products, Technologies, Learn, Events, Developer Sandbox, and Blog. Below the navigation, a sub-header reads "Learn containers, Kubernetes, and OpenShift in your browser". A large, bold heading says "Start exploring in the Developer Sandbox for free". Below this, a sub-instruction reads "Try Red Hat's products and technologies without setup or configuration." A central call-to-action button is labeled "Start your sandbox for free".

The screenshot shows the Red Hat OpenShift Dedicated web interface. On the left, a sidebar lists various developer tools: Developer, Topology, Observe, Search, Builds, Pipelines, Helm, Project, ConfigMaps, Secrets, and Desktop Tools. A blue arrow points from the 'Developer' label to the '+Add' button. The main panel displays two projects:

- Project: crt-216301031-dev**
  - Application: new-app**
    - Service: KSVC cloud-project
    - REV: cloud-project-00001
  - Application: sa-main-app**
    - Service: KSVC new
    - REV: newap-00001

The screenshot shows the OpenShift Dedicated developer interface. The left sidebar contains navigation links: +Add, Topology, Observe, Search, Builds, Pipelines, Helm, Project, ConfigMaps, Secrets, and Desktop Tools. The main content area is titled "Getting started resources". It features two main sections: "Create applications using samples" and "Build with guided documentation". The "Create applications using samples" section includes links for "Basic Quarkus" and "Basic Spring Boot", with a "View all samples" button. The "Build with guided documentation" section includes links for "Get started with Quarkus using s2i" and "Get started with Spring", with a "View all quick starts" button. Below these are four larger cards: "Developer Catalog" (All services, Database, Operator Backed), "Git Repository" (Import from Git, From Local Machine, Import YAML), "Container images" (Deploy an existing Image), and "Create Serverless function" (Create and deploy stateless, Serverless functions).
